

Vision Word provides fast, flexible ways to extract data from MICROS-Fidelio Hotel Systems and MICROS 3700 POS to Microsoft Word documents, allowing you to combine other key corporate information.

Vision Word

Vision Word for MICROS-Fidelio

Vision Word is an intelligent addition to the capabilities of Microsoft Word, providing fast, flexible ways to extract data from MICROS-Fidelio Hotel Systems and MICROS 3700 POS to a Microsoft Word document. Vision Word for MICROS-Fidelio, like Vision XL for MICROS-Fidelio, has pre-configured the useful relationships between the data tables of MICROS-Fidelio Hotel Systems and uses plain English for titles and table columns. There is therefore no need to understand the dynamic database structure of MICROS-Fidelio, enabling you to develop reports easily and quickly.

A Dynamic Link

Vision Word provides a dynamic link, by allowing information to be extracted from multiple tables in the MICROS-Fidelio database to a single document. With its flexibility and ease of use, Vision Word allows non-technical staff to effectively analyze data from within a familiar word processing environment. Vision Word is an Add-Ins that becomes a part of your familiar Word menu.

Vision Mail Merge

Merge is an implementation of MS Word's Mail Merge that works with Vision Word. It allows you to specify a data source for the main merge document, insert, delete or move Vision Merge and Vision Command fields, setup the main document, and execute a Merge. Vision Mail Merge supports Equation Editor fields, which can be calculated each time a record is extracted, using the recalculate command fields.

Accessing Data within Word

Vision Word optimizes database queries and presents information in a simplified view within the Vision Word functions, enabling you to extract data from within MICROS-Fidelio Hotel Systems and MICROS 3700 POS. Vision Word facilitates the easy integration of data into monthly reports, management reports, statutory reports and other documents allowing you to combine information from MICROS-Fidelio Hotel Systems and MICROS 3700 POS with highly formatted narrative content.

Built-In Calculate Logic

Vision Word incorporates built-in calculation logic enabling you to define your own reports more easily and to be confident of the accuracy. This is especially suited to any Period Reporting where for example, a large group staying through the period end can dramatically skew the results, due to the report totalling their entire stay. Vision Word has the ability to calculate this scenario accurately and with no need for any difficult formulas.

Comprehensive Reporting and Analysis

With Vision Word, information can be extracted to a Microsoft Word document from multiple database tables and applications. Your monthly reports can have data extracted from MICROS-Fidelio Hotel Systems, MICROS 3700 POS and your back office accounting system into one template, and all you need to add is the narrative content. This use of Word allows for more comprehensive and wider ranging analysis and reporting.

Features

- Vision Word functions provide a dynamic link between Word and MICROS-Fidelio.
- Access and report on live data rather than pre-summarized data.
- Drill down from aggregated to detailed data.
- Quick and flexible filtering using Bookmarks.
- Incorporate your own User Defined Output.
- Perform statistical reporting using Extract modes such as Sum, Count, Distinct Count and Averaging Modes.
- Vision Setup in conjunction with Vision Word restricts access to certain tables.
- Vision provides security features to ensure only authorized users can access sensitive data.
- Rich multi-lingual and multi-currency functionality.
