## Security Enhancement Release Notification

MICROS Systems, Inc. (MICROS) has developed and released a new security-related enhancement for certain versions of its OPERA Enterprise Solution product (OPERA). This security enhancement applies to OPERA users who were previously operating any version of OPERA prior to version 3.0, and who have subsequently upgraded to any version of OPERA below version 5.0.01.03. This security enhancement does not apply to OPERA users who have not used a version of OPERA prior to version 3.0.

MICROS will make this security enhancement available to its OPERA users at no charge. It can be self-installed by following the procedures contained in this notification. The installation of this security enhancement by MICROS personnel is a scheduled event and a chargeable service. OPERA users who would like MICROS to install this security enhancement can contact their MICROS sales representative to order and schedule the installation.

MICROS strongly recommends that its OPERA users who have previously operated a version of OPERA below version 3.0 and then upgraded to a version of OPERA below 5.0.01.03, install this security enhancement at their earliest convenience.

For security reasons, MICROS does not publish details pertaining to its Security Enhancements.

## Applying this OPERA Security Enhancement

1. Download the following .exe file to a Application, Database, or Single Server:

[ftp://ftp.micros.com/fidelio/opera/customers/operagts/Security\\_Enhancement/Security\\_Enhancement\\_OP\\_09-05-08.exe](ftp://ftp.micros.com/fidelio/opera/customers/operagts/Security_Enhancement/Security_Enhancement_OP_09-05-08.exe)

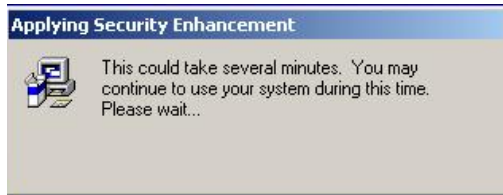

2. Double click the .exe to begin.
3. Click **Next**.

4. Enter your database schema name, password, and instance, and then click **Next**.

- The security enhancement will be applied to your system. This could take between a few minutes to a few hours, depending on the amount of data in your database. This security enhancement will run in the background and should not create any noticeable change in system performance while executing.

- To complete the installation, click **Finish**.
