

Vision Alert complements and enhances the capacity of Vision to identify and analyze the opportunities and problems concealed in corporate data.

Vision Alert

Vision Alert for MICROS-Fidelio

Vision Alert enhances Vision's capacity to identify, analyze and report on performance and trends concealed in your MICROS-Fidelio database.

Vision Alert is an easy-to-use, highly flexible means of automating designated tasks on an event or time driven basis. Features called 'Alerts' enable Vision Alert to make automated, conditional responses to specified conditions in Vision reports.

Vision Alert establishes automated reporting to significantly increase the rate at which information can be extracted, analyzed and reported against. From within a familiar desktop environment, it enables the interrogation of data without expert assistance or technical knowledge.

When defining Tasks,

you can activate a

wide range of

functions including

e-mailing, extracting

workbooks, running

Excel macros and

executing operating

system commands.

Powerful Automated Exception Reporting

Automate as many tasks as you require. Vision Alert allows any number of tasks to be created that can contain interdependent processes. If a limit is exceeded, an Alert is triggered that automatically generates one or more predetermined responses. For example, if occupancy falls below a specified level, Alert can respond by printing a report, distributing the report via e-mail, or outputting to HTML or Excel. Vision Alert schedules tasks to run automatically at any pre-determined time or frequency without further prompting. These tasks can be changed easily and quickly according to your requirements. Vision Alert processes can be re-scheduled automatically if certain conditions are not met, for example, if a file is not available for processing.

Report Casting

Vision Alert communicates directly with your applications and pushes information to your desktop, e-mail distribution list, or to a corporate web site.

Local Area Network or Intranet Deployment

Vision Alert can be deployed either from the client or server. This allows you to schedule and execute tasks using either a Local Area Network (LAN) or a Wide Area Network (WAN). Vision Alert Manager, deployed on either the client or server then executes these tasks at the scheduled times.

Features

- Schedule Tasks using a LAN or a WAN.
- Create multiple Tasks on multiple servers.
- Vision Alert communicates directly with other applications including Microsoft Excel, Microsoft Word, Vision XL, Vision Word and Vision Report Desk.
- Vision eAlert can be used independently to create, edit and schedule Tasks.
- Using the server-based Vision Alert, a Task can be executed without the client machine running.
- Vision Alert uses Greenwich Mean Time (GMT) to resolve international time differences.
- Security features include the encryption of data transmitted between client and server to prevent unauthorized access.
- Distributed Tasks can be password protected.
- Rich multi-lingual and multi-currency functionality.
