Highlights

OPERA Signature Capture provides OPERA users with the ability to electronically capture a guest's signature on the registration card. Instead of providing each guest a printed confirmation of their stay to sign, it can now be presented and confirmed electronically. This "green solution" minimizes a hotel's paper trail. It not only eliminates the use of printed confirmations for each guest, but also stores an electronic record of the confirmation.

OPERA Signature Capture is supported on both a special payment device and a tablet PC. The signature can be captured directly on a special payment device in a traditional front desk architecture, or directly on a table PC allowing for a mobile process. This solution is made possible through a collaborative effort with Orion Systems.

Benefits:

- Reduce costs with GREEN initiatives – electronic registration cards rather than paper registration cards
- Provide quick real-time access to guest registration card information
- Increase capacity of guest service during peak hours of Front of House operations

Functionality

During the check-in process the registration card is electronically presented to the guest. Once the guest has verified the details of the registration card, the guest signs the device (either Tablet PC or payment terminal). The electronic registration card is then stored in an encrypted PDF (.REC file) on the OPERA application server.

As this file is encrypted, it can only be printed with the signature through OPERA via the Orion software, which performs the encrypting and decrypting of the file.

Pricing:

OPERA PMS

- License: \$1,500
- Annual Support: \$570
- Installation: \$300

OPERA Xpress

- License: \$750
- Annual Support: \$285
- Installation: \$300
